### General Description

Featuring the unique Eighteen Sound elliptical shape, the XT1464 Constant Coverage High Frequency Horn has been developed for use in sound systems, where the highest quality is required. With a 1.4" throat entry, the XT1464 has been designed to exactly match the new generation of neodymium high frequency compression drivers, namely the ND1480, ND1460 and NSD1480N.

The XT1464 maintains nominal 60° Horizontal x 50° Vertical pattern control. It provides consistent on-axis and off-axis frequency response from 800Hz to 15kHz in the horizontal plane and from 1,5kHz to 15kHz in the vertical plane. Horn directivity is constant from 1,5kHz. Thanks to its compact vertical mouth dimensions, the XT1464 can easily be staked vertically when lower frequency control is required.

The horn structure made from high-pressure die-cast polyurethane foam eliminates resonance and vibrations and assures maximum strength. The XT1464 provides low distortion and a spherical wave-front, avoiding reflections and other disadvantages usually associated with diffraction horns. The horn contours were developed using Computer Aided Finite Element Analysis, as well as extensive testing.
